

Scrum 1

Team Vecna

Oct 4, 2022

Status

- Yellow
- Got some research and documentation done
- Took us a while to figure out what our tech stack would be so we were unable to begin any coding processes
- To get back on track for our next scrum, we have begun learning React on our own and will start coding immediately to have a login/signup and homepage ready

Tech Stack

- React, MySQL, Node.js
- Netlify
- AWS
- Digital Ocean

Research

- Restaurants: called Burger King and Subway, both mentioned that managers only have access to desktops
- Shelters: called YWCA and Souls Harbour Rescue Mission, employees do not have access to desktops and use their phones
- SEARCH (Student Energy in Action in Regina for Community Health) is a clinic that also provides meals to those who need it in Regina, a member on the board is interested in what we are doing and would be willing to help us test the application for future use

Tasks Completed

- Documentation
- Some Lo-fi prototypes.
- Research - Came to the conclusion that a PWA is better for this project than a mobile app.
- Tech stack

Plan for next Scrum

- Create more Lo-Fi Prototypes.
- Complete high-fidelity prototype (if needed)
- Begin coding
- Do more research, figure out which businesses would actually be willing to help us test the application
- Focus on functionality over design for now
- Set up environment and database
- Set up meeting with Karim
- Create Kanban

Questions for Tim

- How should we tackle notifications if we are not doing a mobile app?
 - Dr. Maciag recommended Twilio for email or SMS notifications.
